EXPERIENCE

AI Engineer, **Fidian AI** — Remote

03/2025 – 04/2025

- Created scalable agentic evaluation system with Temporal.io, capable of processing thousands of AI agent runs and subsequent evaluations of those runs.

Senior Software Engineer, **Fortinet** — Sunnyvale, CA

08/2024 – 12/2025

- Led end-to-end design and deployment of the Syncana monitoring system (AWS EKS), enabling our \$50M+/year FortiSASE product to launch a full suite of Digital Experience Monitoring features:
 - Built a Kafka-based telemetry ingestion pipeline processing 500+ records/sec, increasing throughput by 5x compared to REST polling
 - Deployed self-hosted TimescaleDB instances (timeseries-optimized Postgres) with FastAPI endpoints, providing 30+ days of data retention and sub-second query responses
 - Delivered seasonality-aware anomaly detection and Grafana dashboards, establishing Syncana as the primary observability tool for Ops in diagnosing customer issues

Software Engineer, **Lacework [Acquired by Fortinet]** — Mountain View, CA

03/2024 – 07/2024

- Redesigned security threat detection data models, decoupling from legacy ML and enabling plug-and-play integration with modern models
- Built an LLM-powered anomaly interpretation system (RAG), explaining threats in plain English and recommending actions, which transformed user experience

Senior Software Engineer, **Humanyze** — Palo Alto, CA

07/2018 – 12/2022

- Co-architected [Executive Insights](#) SaaS platform (AWS, React, Django, Postgres), enabling company's pivot from consulting to SaaS model
- Rebuilt ingestion pipeline from single-server to PySpark on AWS EMR/S3, achieving 100x faster processing and \$12K/month cost savings
- Co-invented the [Humanyze Organizational Health Score™](#) system (20+ proprietary metrics, [patent pending](#)), providing executives with quantitative organizational insights
- Designed and launched a benchmarking system for 3TB+ of customer timeseries data, enabling clients to compare performance across industries and global peers for the first time
- Automated customer-facing analytics pipelines (Python, PostgreSQL, graph visualization), delivering insights for 100+ executive presentations and reducing analysis turnaround from weeks to minutes

Previous Employment (not High Tech) — Multiple Locations

02/2012 – 05/2018

EDUCATION

Master of Computer Science, **University of Illinois Urbana-Champaign** — Remote

01/2023 – 12/2023

- Achieved a 4.0 GPA, focusing on distributed systems and machine learning
- Developed low-latency method of sharing DNN tensors between serverless functions ([blog post](#))
- Built a computer vision parking spot detector prototype ([demo video](#) and [blog post](#))

B.S., Mathematics, **Stanford University** — Stanford, CA

09/2008 – 12/2012
